PROFESSIONAL SUMMARY

Junior Software Engineer with hands-on experience developing web applications using Python and Django. Skilled in database-driven development with PostgreSQL, frontend integration using JavaScript, and web automation using Playwright and Selenium. Experienced with Git, Docker, testing, and automation, and deployment, with a focus on building practical and maintainable software solutions.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, SQL

Web Technologies: HTML5, CSS3

Frameworks & Libraries: Django, FastAPI, React

Databases: PostgreSQL

Tools & Devops : Git, GitHub, Docker, Nginx, Linux, Postman

Automation: Playwright, Selenium, Scrapy

Additional: REST APIs, Asynchronous Programming, Unit Testing, Web Scraping, Web Automation, Software Testing, Apache Kafka

WORK EXPERIENCE

Junior Python Developer · Novox EdTech, Calicut

Oct 2024 – Jun 2025

- Developed and maintained 3 Django-based web applications using Python, SQL, HTML, CSS, and JavaScript during the internship.
- Gained hands-on experience implementing Django features including user authentication, CRUD operations, and database connectivity.
- Integrated frontend and backend components using Django and JavaScript to support application functionality.
- Worked with PostgreSQL and Django ORM to manage application data and implement database-driven functionality.

PROJECTS

E-Commerce Web Application | Django · Python · PostgreSQL · JavaScript · Razorpay · Docker

- Developing a full-stack e-commerce application featuring product browsing, cart management, checkout, and online payment integration.
- Implemented cart functionality with product selection and quantity updates using Django ORM and PostgreSQL.
- Containerized and deployed the application with Docker, Gunicorn, and Nginx on an Oracle Cloud server.

Chat Application | Django · WebSockets · Django ORM

- Developed a real-time user-to-user chat system with private messaging using Django authentication.
- Implemented a custom database-backed validation system to enforce user security throughout message workflows.

Web Scraping & Automation | Python · Playwright · Scrapy

- Automated Excel report generation using Python and openpyxl, programmatically loading pivot table data, generating bar charts, and exporting the final workbook, reducing manual charting effort.
- Built a headless Selenium scraper using XPath to extract football news headlines, subtitles, and links from a live website, storing results in timestamped CSV files.
- Authored cross-browser UI test scripts with Playwright (Chromium & Firefox), covering form interactions, role-based locators, and login flows.
- Enhanced scraping reliability through asynchronous browser handling, automated interactions, and error management.

EDUCATION

Bachelor of Computer Applications (BCA)

Vivekanad Global University, Jaipur (Online Distance Learning)

2025 – 2028
